It's time for consensus on facial recognition in law enforcement

Like fingerprint identification technology, facial recognition has the potential to significantly improve the effectiveness and efficiency of police investigations.

How AI can speed the security clearance process

Continuous vetting, made possible by artificial intelligence and automation, provides a more deliberate and efficient process that protects data privacy, improves security and saves time and resources.

Toward the deployment of ethical AI

As agencies navigate the ethics surrounding artificial intelligence technology, they can learn to identify and avoid bias, an IDC analyst says.

Wanted: Digital whizzes to work in agriculture

The next generation of farm workers will need advanced tech skills to manage increasing numbers of robots, monitoring systems and autonomous vehicles required for precision agriculture.

How agencies can control access to IoT data

Dynamic authorization with attribute-based access control allows agencies to securely share IoT data by only allowing authorized users access to sensitive data under the right conditions.

Identifying Trojans in AI

Government researchers are looking for ways to automatically inspect artificial intelligence and machine learning systems to see if they've been tampered with.

AI: It's all about the fundamentals

A group of artificial intelligence specialists from across government came together to discuss what's needed to bring AI into the federal IT mainstream.

SPONSORED BY: Cybersecurity CDM Event

May 22nd: Cybersecurity CDM event

Attend FCW's CDM event to hear cybersecurity experts from DHS, NASA, DOE, and more discuss CDM DEFEND. They'll examine the evolution of cyber threats, the tools and services to repel them, and new opportunities in this new phase of the CDM program. Don't miss this event-
